- Configured and deployed existing and future REST APIs, integrating with third-party APIs.
- Performed troubleshooting of technical issues within production environment.

## MY PORTFOLIO

### Hire A Mover

**Technologies** : Frontend - WordPress, Backend - CodeIgniter, HTML, CSS, jQuery, GIT, Envoyer

**Duration** : 11 months

The website is for hiring movers and packers for the citizens of Australia. Users can get on to the website and hire movers and packers and get a quote. After the acceptance of submitted quotation the tracking process is shown to the users at every steps. The content management and custom booking process is managed in WordPress. A dedicated CRM is built for processing the quotation, followups, reports, salary management, commissions etc.

### Workflow

**Technologies** : Laravel, React, HTML, CSS, GIT, Custom APIs

**Duration** : 13 months

The website is CRM based software where the user will be importing excel sheets with their customer's data and will have more than 10k records. The crm will import all those records to database after validating and then manipulate each records and then export it. There are other functionalities like user management, files & folder management, permission management etc.

### Zentaa

**Technologies** : CodeIgniter, JQuery, HTML, CSS, Custom APIs, Flutter

**Duration** : 9 months

This is a food management software made for a Restaurant owner. The owner can manage the orders, manage food, employees, manage QR codes, generate reports, manage payment etc. Initially it was for a single restaurant, later it was developed for multi restaurant when different restaurant owners can register and manage their restaurant. The APIs for mobile was also developed which managed all the mobile based operations.

### Digitalboard

**Technologies** : Laravel, JQuery, HTML, CSS

**Duration** : 5 months

The client needed a custom made google calendar like software for their employees. The employees can login, and see their tasks and update them. The managers create tasks and allocate them to the available employees with the time. The super admin manages all the users.

### FFD

**Technologies** : Laravel, JQuery, HTML, CSS, Hamburger API

**Duration** : 7 months

This web application is a food management software made for a Vegetable vendor. The client gets order from a third party app called Hamburger which provides API to fetch the records from them. The software made manages food and its recipes. When the orders are being fetched into the software they are stored in to db, manipulated and shown order summary to each type of user like which items are needed to be chopped etc. Packers get the packing data, processors get the data that needs to be processed etc.

### Lendeckel-it

**Technologies** : WordPress, Figma, Woocommerce

### Margreiter

These are some of the wordpress websites I have built using wordpress, woocommerce, CPT, ACF etc. I have experience in working with several plugins, customize themes and plugins if needed, set up payment methods and built fully fledged websites. Overall I have made more than 25 projects in WordPress.
